- <https://github.com/justarzun>

TECHNICAL SKILLS

Languages: Ruby, JavaScript, HTML, CSS, SQL

Frameworks: Ruby on Rails, React.js, RSpec, FactoryBot, Bootstrap, jQuery

Databases: MySQL, PostgreSQL, Redis

Tools: Git, GitLab CI/CD, Sidekiq, Jenkins, Jira, AWS EC2, Linux

Concepts: REST APIs, MVC Architecture, TDD, API Integration, Database Optimization, Agile Methodology

WORK HISTORY

Ruby on Rails Developer

12/2025 - Present

Parity Cube Pvt Ltd

Mumbai, Maharashtra

- Working on the backend of an affiliate marketing platform built in **Ruby on Rails** with **PostgreSQL**, **Sidekiq** and **Redis**, which connects with many affiliate networks and handles a large volume of publisher transactions.
- Building new features and **REST APIs**, including writing migrations, models, services and background workers, and taking them from development to production.
- Integrating third-party APIs for payments, KYC document verification, messaging and partner networks, along with **web-hooks** and retry logic where needed.
- Working on payment and invoice flows for publishers, including multi-currency support, country specific rules and validations for bank and IFSC details.
- Improving the authentication system by adding **2FA**, **OTP** verification, account lock after multiple failed attempts and **Slack** alerts for important events.
- Adding admin panel features such as bulk approve, reject and hold actions, manager reassignment and other tools that help

the operations team save time.

- Improving performance by optimizing **ActiveRecord** queries, fixing **N+1** issues, adding proper indexes and writing scripts for partitioned tables that store high volume data.
- Debugging production issues like API rate limits, scheduler problems and data related bugs, and fixing the root cause instead of just the symptom.
- Coordinating with frontend, AI and product teams during feature work, writing requirement documents when needed and reviewing pull requests from other developers.

Software Engineer

07/2023 - 10/2025

Skyach Software Solutions

Mohali, Punjab

- Worked on backend development in **Ruby on Rails** with **MySQL**, building **REST APIs** and handling features from database design to deployment.
- Integrated third-party services like **Twilio** for SMS and **Mandrill** for transactional emails, and added webhook handling for delivery status.
- Used **Sidekiq** with **Redis** for background jobs so that heavy tasks like email sending and report generation did not slow down API responses.
- Built real-time features using **AnyCable WebSockets** in place of polling, which reduced load on the server.
- Implemented search using **Thinking Sphinx**, including index setup, delta indexing and tuning the results.
- Developed frontend pages using **React.js** and **Bootstrap** and connected them with the Rails APIs.
- Optimized **MySQL** queries by adding proper indexes and checking query plans using **EXPLAIN**, which helped fix slow pages.
- Wrote tests using **RSpec** and **FactoryBot** for controllers, services and workers to keep the code stable.
- Helped in the **Rails 6** to **Rails 7** upgrade by fixing deprecations and updating gem versions.
- Supported deployment and debugging on staging and production along with the QA and DevOps team.

EDUCATION

B.Tech: Computer Science, 05/2023

Sardar Beant Singh State University – Gurdaspur, Punjab

GPA: 7.0
